# Fall 2023 COVID-19 Assessment Tool

Designed to help Canadians understand which vaccinations are recommended for them.

COVID-19 will be on the rise again this fall, and new vaccines are being introduced to protect against it.

Many Canadians are confused about whether they need another dose of a COVID-19 vaccine and which vaccines are recommended for them.

CANImmunize has built a COVID-19 vaccination assessment tool based on NACI guidelines for the fall 2023 season. This tool is designed to help Canadians understand which vaccinations are recommended for them.

CANImmunize   FR

The new COVID-19 vaccine is recommended for you!

Based on the information you provided, and NACI guidelines, an updated COVID-19 vaccine may be right for you. Talk to a healthcare provider for more information.

When to get your next dose: you are eligible today!

SPIKEVAX™ XBB.1.5
by Moderna

Book Now

It will increase your protection against COVID-19. It may provide additional benefit to those at higher risk. mRNA vaccines are the preferred COVID-19 product due to their high efficacy, effectiveness, and safety profile. Talk to a healthcare provider for more information.

COMIRNATY® XBB.1.5
by Pfizer-BioNTech

It will increase your protection against COVID-19. It may provide additional benefit to those at higher risk. mRNA vaccines are the preferred COVID-19 product due to their high efficacy, effectiveness, and safety profile. Talk to a healthcare provider for more information.

MacBook

Quick & Easy to use

This tool complements other vaccination promotion efforts by providing individuals who complete **a simple questionnaire** with a vaccine recommendation that is **customized to their demographics, immunization history, and risk factors.**

Consistently Updated

The vaccination assessment tool will be updated throughout the fall as NACI guidelines change so individuals can be confident they are receiving the **most up-to-date recommendation for their province or territory**.

White-Labelled

The tool is **designed to be white-labelled** and/or embedded into health organization websites, and can be **supported in both English and French**. Other languages can be supported as needed.

Privacy Protected

Patient privacy is protected, as **no identifying information is collected**.

> "Vaccination schedules are getting increasingly complicated. Helping people navigate these complicated schedules can improve vaccination rates and protect the public."
